

GROUP WIDE INTELLIGENCE

"Prepare a board-ready summary of group performance and priorities."

"Across all Grade 8 English classes, which topics are the least understood by students?"

How does Year 10 Maths performance compare across our schools?"

"Which schools need central support or challenge first, and why?"

"Which school is delivering the best outcomes for disadvantaged students and what are they doing?"

"Show me group-wide trends in attendance, behaviour and attainment over three years."

ASK YOUR
SCHOOLS
(ALMOST)
ANYTHING

Get actionable insights, make decisions, and build plans from across every bit (and byte) of your schools, without changing (almost) anything.

GROUP WIDE INTELLIGENCE

Compare what your plans and policies say with what is happening in practice, quickly make necessary changes and track progress in real time, all using natural language.

WALK INTO EVERY CONVERSATION KNOWING WHAT'S HAPPENING, WHY AND WHAT YOU CAN DO ABOUT IT

Trust-Wide Intelligence isn't another dashboard. It is a nerve centre that sees every fragment of data across every school. Structured metrics alongside unstructured text, including your groups plans and policies, are together in a single, queryable intelligence layer. Instead of hunting through disparate SIS or MIS systems, spreadsheets, board packs, surveys, additional needs data, and more, leaders can ask conversational questions and receive instant, evidence-backed answers.

→] "Where does the evidence support our improvement plan and where are the gaps?" Highlight differences across the group."

Edu Intelligence compares schools on a like-for-like basis, adjusting for context, and shows where a gap is a genuine performance difference rather than a difference in intake.

It surfaces the practice worth sharing and the schools that need support first.

See priorities & evidence-based recommended action in minutes

Discover the correlations behind the differences between your schools and get a prioritised view of where central support, challenge or shared practice will have the greatest impact across the group.

GROUP REPORTING & GOVERNANCE

Ask questions of your data and produce group-wide reports, board papers and school-by-school comparisons that used to take hours or days, in minutes.

SCHOOLS, COHORTS AND CHARACTERISTICS

Spot the issue in one school before it appears in the others.

See what is happening across schools, year groups and key groups, and identify where a concern is emerging before it becomes a group-wide problem.

ONE SCHOOL'S EARLY WARNING IS THE GROUP'S HEAD START.

A dip in one school, a widening gap for a particular cohort, or a policy that is working in one place and not another becomes far more meaningful when you can see all your schools side by side.

"What has changed across our school since last term, and what needs our attention now?"

Edu Intelligence identifies patterns across schools, characteristics, attendance, behaviour and attainment to show which schools, cohorts or groups are beginning to shift.

It helps trust leaders understand what is driving the differences between schools, who is affected, and where to direct support and challenge.

INTELLIGENCE IS AT THE SCHOOL LEVEL TOO

Principals and leaders don't have to wait for multiple reports to better understand their school and to be able to act on evidence backed intelligence.

Edu Intelligence show the signals and connections across school life, helping leaders understand what is happening beneath individual performance, figures and reports, from strategic plans, right down to the individual student level.

CREATE CURRICULUM ALIGNED LESSON PLANS & INTERVENTION SEQUENCES.

Unlike those created by ChatGPT, Claude, Co-pilot, Gemini and other generic AI planning tools, these will be grounded in your group or school's own data, students' prior attainment and their knowledge gaps.

Including knowledge for all subjects and over 17,000 expert teacher-written resources, which will automatically adapt to any country, state or school system.

Plan for whole year groups, students with additional needs, other cohorts, and individual student needs. Ask EI to place students together into groups covering those needing intervention or support on specific topics and plan multiple sessions. Quickly see which interventions are working and where changes are needed.

"Plan me a Year 6 sequence of work for Fractions, including resources and lesson plans for each session."

"Create an intervention sequence and session plans to address the biggest area of weakness in Maths for Harriet Barrett."

Ask for a lesson plan and receive one that is complete and ready-to-teach, including objectives tied to the curriculum, timed phases, and misconceptions to look for.

Produce differentiated versions, schemes of work, and more, all tied to the current data for cohorts and individual children (assessment, attendance, behaviour, documents, etc.

I have other priorities

If you are interested in improving outcomes, personalised learning, preparing for inspection, improving behaviour and attendance and group wide intelligence.

GETTING GOING

Edu Intelligence AI lays on top of your school's information and tech, like a blanket.

This means a school doesn't have to change or replace anything to get started.

The EI team:

- 1 Chat to your leadership team about how your Group or school works.
- 2 Map out the relevant data, documents, and information sources.
- 3 Ensure EI sees it all.
- 4 Provide your staff with logins and introductory training.

**YOU CAN BE UP AND
RUNNING IN  **DAYS****

Speak to one of our education experts.

Come with a real priority, question or situation from across your Group or school. We will show you how Edu Intelligence will approach it and answer any practical questions about your systems, security, implementation or costs.
